2. COMMAND: FINGER

```
C:\Users\Comp 1>FINGER
```

Displays information about a user on a specified system running the Finger service. Output varies based on the remote system.

```
FINGER [-l] [user]@host [...]
```

-l	Displays information in long list format.
user	Specifies the user you want information about. Omit the user parameter to display information about all users on the specified host.
@host	Specifies the server on the remote system whose users you want information about.
